Η	ow much energy is released or absorbed when 1 of steam at 100 °C turns to ice at 0 °C?  ow do you appreciate the role of the higher specific heat of water in stabilizing atmosphere temperature during winter and summer seasons?  is used as a coolant.

Name: 12th CBSE-A-Mathematics

Specific heat S=
The SI unit of specific heat is \_\_\_\_\_.

Suppose that 1 l of water is heated for a certain time to rise and its temperature by 2 °C. If 2 l of water is heated for the same time, by how much will its temperature rise in °C? How much energy is transferred when 1 gm of boiling water at 100 °C cools to water at 0 °C? Specific heat = 1 cal gm-1 °C-1 and latent heat 540 cal gm-1. Explain the procedure of finding specific heat of solid experimentally?

What role does specific heat play in keeping a watermelon cool for a long time after removing it from a fridge on a hot day?
